

OXENSPAS

Camylofin Dihydrochloride 50 mg and
Paracetamol Tablets IP 325 mg

OXENSPAS (Camylofin Dihydrochloride and Paracetamol Tablets) is a combination of two medicines mainly belongs to the class of anticholinergic and analgesic respectively.

INDICATION :

- ★ **Dysmenorrhea (Abdominal cramps)**
- ★ **Irregular periods**

MECHANISM OF ACTION :

Camylofin works by relaxing the muscle of the stomach and intestine which reduce the pain and cramps in abdominal pain and paracetamol works by inhibiting the chemical messenger that causes pain.

DOSAGE :

Camylofin (50 mg) and Paracetamol (500 mg)/Tablet, or as directed by the physician.

TRANXONEXT 500

Tranexamic Acid 500mg Tablets

TRANXONEXT (Tranexamic acid) is in a class of medications called Antifibrinolytics.

INDICATIONS :

Tranexamic Acid is used in the treatment of bleeding. It is used to prevent or reduce bleeding for a short period of time in conditions like heavy periods, dysfunctional uterine bleeding, nosebleed, tooth removal, after prostate surgery or after bladder surgery.

MECHANISM OF ACTION :

TRANXONEXT 'tranexamic acid' acts by regulating the breakdown of blood clots in the body. It blocks the release and action of plasmin which is an enzyme essential for the breakdown of clots present in the blood. This effect helps to slow down the abnormal bleeding.

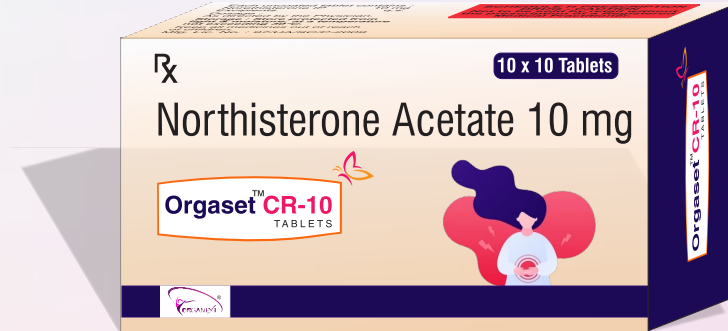

DOSAGE :

2 tablets 3 times daily as long as needed or as directed by the doctor

Orgaset CR 10

Norethisterone 10 mg Tablets

Orgaset 10 (Norethisterone) is in a class of medications called progestins. This medication is generally used for the treatment of various menstrual disorders.

Indications :

- Heavy Menstrual Bleeding
- Painful Periods
- Premenstrual Syndrome (PMS)
- Endometriosis

Mechanism Of Action :

Orgaset (Norethisterone) is a synthetic progestin. It works by mimicking the effects of natural progesterone (female hormone). Thereby, Norethisterone restores hormone levels in the body and regulates the growth and shedding of the womb lining. Thus, it helps to treat menstrual disorders.

Dosage :

The general dose is 5 - 15 mg per day or as directed by the physician.

Orgaset 5

Norethisterone 5 mg Tablets

Orgaset 5 (Norethisterone) is in a class of medications called progestins.

This medication is generally used for the treatment of various menstrual disorders.

Indications :

- Heavy Menstrual Bleeding
- Painful Periods
- Premenstrual Syndrome (PMS)
- Endometriosis

Mechanism Of Action :

Orgaset (Norethisterone) is a synthetic progestin. It works by mimicking the effects of natural progesterone (female hormone). Thereby, Norethisterone restores hormone levels in the body and regulates the growth and shedding of the womb lining. Thus, it helps to treat menstrual disorders.

Dosage : The general dose is 5 - 15 mg per day or as directed by the physician.

MERIALFA

Methylcobalamin, Calcium Carbonate, Vitamin B1/B6,
Alfacalcidol, Folic Acid & Zinc With Ginkgo Biloba Tablets.

MERIALFA is a unique and miraculous combination of 8 Essential vitamins and minerals that helps in boosting the bodily functions and complete the Nutrient Deficiencies of the Body.

It is primarily composed of :

Methylcobalamin, Calcium Carbonate, Vitamin B1/B6 , Folic Acid,
Alfacalcidol, Zinc & Ginkgo Biloba .

HEALTH BENEFITS: The list of health benefits provided by this miraculous product is a never ending one.

- Boosts Muscle and Bone Growth.
- Strengthens the Nervous system.
- Relieves Gastric conditions like Indigestion and upset stomach.
- Boosts Metabolism and immune system.
- Improves Brain function.
- Boosts Energy levels
- Reduces stress and anxiety
- Beneficial for hairs and skin.

Summing up, This wonderful product has health benefits ranging from tip to toe.

DOSAGE:-

Used as a dietary supplement, 1 Tablet once or twice a day or as directed by the dietician.

Orgynogest SR 200

Progesterone Sustained Release Tablets 200 mg

It is in a class of medications called progestins (female hormones).

INDICATION :

Regulating menstrual cycles and treating irregular periods

Supporting pregnancy and preventing miscarriage.

Managing symptoms of premenstrual syndrome (PMS).

MECHANISM OF ACTION :

Progesterone is a steroid hormone that regulates the development and function of the uterus by regulating the transcription of specific genes in the uterus. Progesterone works by thickening the uterine lining and creating a good environment for a fertilised egg to implant. If an egg isn't fertilised during that cycle, the corpus luteum breaks down, which decreases progesterone levels.

DOSAGE :

One tablet once daily or as directed by the physician.

Orgynogest SR 300

Progesterone Sustained Release Tablets 300 mg

It is in a class of medications called progestins (female hormones).

INDICATION :

Regulating menstrual cycles and treating irregular periods

Supporting pregnancy and preventing miscarriage.

Managing symptoms of premenstrual syndrome (PMS).

MECHANISM OF ACTION :

Progesterone is a steroid hormone that regulates the development and function of the uterus by regulating the transcription of specific genes in the uterus. Progesterone works by thickening the uterine lining and creating a good environment for a fertilised egg to implant. If an egg isn't fertilised during that cycle, the corpus luteum breaks down, which decreases progesterone levels.

DOSAGE :

One tablet once daily or as directed by the physician.

OrgaduphTM 10

Dydrogesterone Tablets IP 10 mg

ORGADUPH 10- Dydrogesterone belongs to the class of pregnadien derivative progestogens.

INDICATIONS:

- ★ Absent, Irregular or Painful Menstrual Periods
- ★ Infertility
- ★ Premenstrual Syndrome
- ★ Endometriosis

MECHANISM OF ACTION:

ORGADUPH 10- Dydrogesterone is a progestogen that works by regulating the healthy growth and normal shedding of the womb lining by acting on progesterone receptors in the uterus.

DOSAGE:

10 mg twice a day or as directed by the physician.

Corpaleum-10

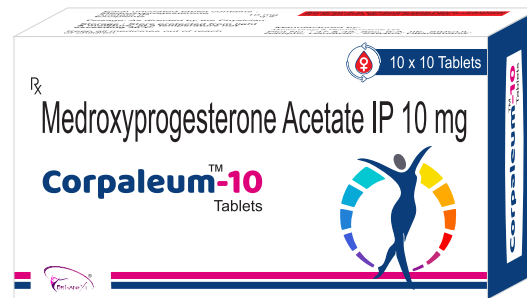

Medroxyprogesterone Acetate Tablets IP 10 mg

Corpaleum 10 is similar to the progesterone hormone naturally produced by the body. It regulates periods, stops irregular bleeding, and helps with withdrawal bleeding in cases of amenorrhea (unusual stopping of menstrual periods)

INDICATIONS :

- ★ Treatment of Abnormal uterine bleeding
- ★ Treatment of Amenorrhea
- ★ Treatment of Endometriosis

Also Available:

CORPALEUM SR 30

Medroxyprogesterone Acetate
Sustained Release Tablets 30 mg

MECHANISM OF ACTION :

Medroxyprogesterone acetate (MPA) inhibits the production of gonadotropin, preventing follicular maturation and ovulation, which is responsible for its ability to prevent pregnancy. This action also thins the endometrium. MPA reduces nuclear estrogen receptors and DNA synthesis in epithelial cells of the endometrium

DOSAGE :

Take once in day
